

**ComputerVault Certifies Extreme Networks
X690 Series Switches**

*ComputerVault White Paper
July 2021*

Extreme Switches / X690 / 48 Port / 10 Gigabit

Extreme Networks X690 Series Switches Certification

ComputerVault is a Single Platform Solution that includes Virtual Desktops, Virtual Application Servers, Hyper-converged Infrastructure, Internet-of-Things Edge-to-Core Management, Virtual Networking, Soft VoIP and private video conferencing.

The cybersecurity features are based on a Zero Trust Security Model and include Multi-Factor Authentication, a Software Defined Perimeter, and other advanced cybersecurity features. ComputerVault is deployed onsite or in a datacenter or colocation facility as a managed service.

ComputerVault certifies the Extreme Networks ExtremeSwitching™ X690 High-Performance 48-port 10Gb aggregation and leaf switch designed for high-performance enterprise and aggregation applications.

ComputerVault and **Extreme Networks** deliver virtual desktops that are:

- Faster than a local PC both in the LAN and WAN
- Costs less than buying and supporting PC's

Extensive testing revealed that the Extreme Networks X690 Series Switches *exceeded* all performance requirements necessary to deliver virtual desktops with faster than PC or laptop performance.

All features such as fault tolerance, uplink, etc., worked as designed the first time out of the box and installation of the administration tools was simple with user friendly, intuitive interfaces.

Simplify Solutions Infrastructure

With Extreme Networks and ComputerVault, virtual desktops do not demand significant time and resources to deploy and maintain. IT is free to focus on delivering applications, drive innovation, enhance efficiency and agility for their business.

From its NOC, ComputerVault provides all the software administration for the technology stack remotely, as part of the software license. Customers do not need to maintain ComputerVault software administrators on staff, as they do with competing virtualization products.

Also included in the software license is deployment, patching and upgrades by ComputerVault certified engineers. Deployed in a matter of hours, ComputerVault eliminates expensive projects to get up and running. There is also never any additional cost for patching and upgrades.

Some of the other key benefits of the solution include:

Reduced Technology TCO: Deploy the appropriate amount of server, storage and networking resources to meet current requirements and eliminate risk and over-provisioning.

X690

High Performance and Reliability: No boot storms and faster than a PC.

Solves Work from Home: Your work desktop with faster than PC performance in the WAN.

Ease of Scaling: Start with a small pilot project and grow to thousands of users without disruption or performance degradation.

Fast Turnkey Deployment: A turnkey solution that deploys in a few hours. Neither IT nor the end user require any training – just log in and use.

Immediate ROI: Start saving money on day one.
